

Web Based Technical Manual Overview

The NAVAIR 11-100-1.1 technical manual informs fleet personnel of the application, purpose, and procedures for proper identification, handling, storage, and general use of cartridges and CADs, cartridge associated hardware, and aircraft detonating cords.

It also describes CADs used for bomb racks/launchers and airborne missile systems.

This manual also encompasses information on PADs.

Information is included concerning function, description and location, operation, identification and handling, service life, and safety.

Special maintenance precautions are emphasized for care in loading and assembly that are necessary to assure reliable operation.

AUDIO: This section of the web based training program was developed to provide guidance on accessing all of the information contained in the NAVAIR 11-100-1.1 CAD/ PAD Technical Manual. Until this portion of the training module is fully operational utilize the on-line help menu contained within the Web version of the CAD/PAD tech manual. The on-line help menu will assist you in accessing information contained within, and navigation through the manual by utilizing a Windows point and click graphical interface.
